3.3 Screw Neck ND24 (EPA)

"Ready to use combination seals; no time-consuming and "tricky" assembly No contamination of the liner with sweat/fat that normally is caused by manual assembly .Available as closed top screw seals or with centre hole in white 24-400 caps .Broad variety of different septa materials for almost all applications Also UltraBond Seals ND24 are offered, i.e. that the cap and the Silicone/PTFE liner of these seals form an inseparable unit avoiding the problem of liners falling out of the cap. This 100% firm fit of the liner is achieved by a patented process that requires no adhesives, but instead .changes the molecular structure of both components to achieve the fixation Also pre-sealed vials are available!"
